

BESTWORTH PRODUCTS LIMITED

Client Delivery & Acceptance Test Guide

Role-based administration, News & Media, newsletter capture, video publishing and public-site experience improvements.

6

permission modules

50MB

video upload limit

10

acceptance tests

DELIVERY DATE

20 August 2026

Document overview

This handoff records the delivered system capabilities, the deployment conditions required before review, and a structured client acceptance process.

01 Delivery summary

Owner and worker access, publishing, newsletter and public experience

02 Deployment checklist

Environment, backend restart and one-time role migration

03 Client acceptance tests

Ten practical tests with clear expected outcomes

04 Acceptance record

A concise sign-off matrix for the client review

05 Operational notes

Autoplay, external services, upload limits and account deletion

1. Delivery summary

Owner and worker access

- The existing administrator remains the system owner with full access.
- Owners can create worker accounts and assign access separately for:
 - Overview
 - Catalog
 - Leadership
 - Inquiries
 - News & Media
 - Site CMS
- Each module supports **No access**, **View only**, or **Manage** permission levels.
- Permission checks are enforced by both the admin interface and backend API.
- New workers must replace their temporary password at first sign-in.
- Owners can edit worker details, reset passwords, enable or disable accounts, and review access activity.
- A worker must be disabled before the owner can permanently delete the account.
- Deletion requires confirmation and removes the worker from the database, preventing future sign-in.
- Worker search is available, with controlled scrolling for long worker lists and recent activity.
- Login rate limiting protects the administration sign-in endpoint from repeated failed attempts.

News, Media and Newsletter administration

- A dedicated **News & Media** admin module is available to owners and authorized workers.
- Editors can create, edit, publish, draft, feature and delete news or video content.
- Content supports title, slug, author, excerpt, full body, publication date and search metadata.
- News posts require a cover image.
- Video posts do not require a cover image.
- Videos can be supplied in either of two ways:
 - Paste a YouTube, Vimeo or direct hosted-video URL.
 - Upload MP4, WebM, OGG or MOV files up to 50MB.
- Uploads display progress and prevent saving until the upload completes.
- Uploaded videos use database-backed GridFS storage and byte-range streaming for playback and seeking.
- Owners can view captured newsletter subscribers. Subscriber contact data remains owner-only.
- Workers require the relevant News & Media permission before they can view or manage publishing.

Public News & Media section

- The homepage section uses a clean horizontal presentation:
- Media presentation on the left.

- Newsroom introduction and newsletter subscription on the right.
- Previous and next controls remain available.
- When multiple posts exist, news stories advance automatically every 15 seconds while the section is visible.
- A video is never interrupted by the carousel; the next item appears only after the video finishes.
- Homepage videos begin muted after the section has remained visible for five seconds.
- Leaving the section pauses the active video.
- Custom controls provide play, pause, mute, progress, time and fullscreen functions where supported.
- Videos without uploaded cover images display a real video preview frame instead of a blank container.
- Preview frames are used consistently on the homepage, newsroom list, related stories and admin screens.
- Real-time synchronization refreshes published content without requiring a manual page reload.

Full newsroom and content pages

- **View all updates** opens a dedicated, responsive newsroom index.
- The newsroom uses restrained typography, editorial rows, fine dividers, search, content filters and pagination.
- Individual content pages use a spacious reading layout with controlled headline sizes and metadata.
- Video detail pages use the custom Bestworth player rather than default browser controls.
- Related stories follow the same editorial design language.
- Empty, loading and no-result states are included.

Newsletter and policy support

- Visitors can subscribe from the public News & Media section.
- Consent to the Privacy Policy is required before subscription.
- Duplicate and invalid subscriptions are handled by the backend.
- Privacy Policy and Cookie Policy links remain available in the public footer.
- This delivery captures subscribers; it does not introduce a newsletter campaign-sending tool.

Supporting improvements

- Public media URLs continue to follow the configured PUBLIC_APP_URL domain.
- Legacy Bestworth media hosts remain normalized for compatibility.
- The contact map safely extracts the map URL when full iframe markup was pasted into the CMS field.
- Branded QR assets are available in web, SVG and print-quality PNG formats.

2. Deployment checklist

Complete these items before client testing:

- 1 Deploy the latest frontend and backend code together.
- 2 Restart the backend service after deployment so the new upload, media-streaming, role and publishing routes are active.
- 3 Confirm the production environment contains:
 - MONGODB_URI
 - PUBLIC_APP_URL=https://bestworthproductsltd.ng
 - The configured email provider variables
- 4 Run the role migration once if it has not already been run:

```
cd app/server
npm run migrate:user-roles
```
- 5 Confirm the owner account can sign in before issuing worker credentials.
- 6 Test through a normal internet connection with VPN or browser proxy tools disabled if they interfere with Google Maps or external video providers.

The migration preserves the existing administrator and explicitly identifies it as the owner. It does not invalidate the existing owner account.

3. Client acceptance tests

Test A - Owner access

- 1 Sign in with the existing owner account.
- 2 Confirm all admin navigation modules are visible.
- 3 Open **Worker Access**.
- 4 Confirm worker search, worker list and recent activity are visible.

Expected result: The owner has unrestricted access and can manage workers.

Test B - Create and secure a worker

- 1 Create a worker with a unique name, username and work email.
- 2 Give the worker **View only** access to Catalog and **Manage** access to News & Media.
- 3 Sign out and sign in as the worker using the generated temporary password.
- 4 Complete the required first-password-change screen.
- 5 Confirm the worker can view Catalog without editing it.
- 6 Confirm the worker can create or edit News & Media content.
- 7 Confirm inaccessible modules are absent and their API actions are rejected.

Expected result: The worker sees and performs only the actions granted by the owner.

Test C - Disable and delete a worker

- 1 As owner, disable the test worker.
- 2 Attempt to sign in with that worker account.
- 3 Confirm sign-in is rejected.
- 4 Return to Worker Access and select **Delete account**.
- 5 Review and confirm the deletion modal.
- 6 Attempt the worker sign-in again.

Expected result: Disabled workers cannot sign in; deleted workers are permanently removed and remain unable to sign in.

Test D - Publish a news article

- 1 Open **News & Media** in admin.
- 2 Choose **New content** and select **News**.
- 3 Enter the required article information and upload a cover image.
- 4 Save it first as a draft.

- 5 Confirm it does not appear publicly.
- 6 Edit it, set a publication date that is not in the future, and publish it.
- 7 Open the public homepage and newsroom index.

Expected result: Draft content remains private; published content appears on the homepage and newsroom pages.

Test E - Upload and publish a video without a cover

- 1 Create new content and select **Video**.
- 2 Leave the optional cover-image field empty.
- 3 Upload an MP4, WebM, OGG or MOV file smaller than 50MB.
- 4 Observe the upload percentage and wait for completion.
- 5 Complete the title, excerpt and description, then publish.
- 6 Confirm an early video frame appears in the admin preview and public listings.
- 7 Open the video detail page and test play, pause, mute, seeking and fullscreen.

Expected result: The video uploads and streams successfully without requiring a cover image, and no blank preview container is shown.

Test F - Publish a video using a URL

- 1 Create another Video item.
- 2 Paste a valid YouTube or Vimeo link into **Video URL** instead of uploading a file.
- 3 Leave the cover image empty and publish.
- 4 Confirm the provider preview appears in admin and public listings.
- 5 Open the detail page and test the custom controls.

Expected result: URL-based videos remain fully supported and display a provider preview frame.

Test G - Homepage timing and carousel

- 1 Publish at least two items, including one news article and one video.
- 2 Scroll to News & Media and remain in the section.
- 3 Confirm a news item advances after approximately 15 seconds.
- 4 When the video becomes active, remain in the section for five seconds.
- 5 Confirm the video begins muted.
- 6 Confirm the carousel does not change while the video is playing.
- 7 Allow the video to finish.
- 8 Confirm the next item appears after completion.
- 9 Repeat the test but scroll away while the video is playing.

Expected result: News advances on schedule; video controls the slide duration and pauses when the visitor leaves the section.

Test H - Newsletter consent

- 1 Enter a valid test email in the public subscription form.
- 2 Try submitting without accepting the Privacy Policy.
- 3 Accept the policy and submit again.
- 4 Sign in as owner and inspect the subscriber list.

Expected result: Consent is required and the accepted subscriber appears in the owner-only list.

Test I - Responsive presentation

Repeat the homepage, newsroom index and content-detail tests at approximately:

- Mobile: 375px width
- Tablet: 768px width
- Desktop: 1440px width

Expected result: Content remains readable, controls remain reachable, no horizontal page overflow appears, and video controls fit inside the media frame.

Test J - Login rate limiting

- 1 Use a dedicated test worker account.
- 2 Enter an incorrect password repeatedly.
- 3 Confirm the API temporarily rejects additional attempts with a clear retry message.
- 4 Wait for the indicated retry period and sign in correctly.

Expected result: Repeated failed attempts are throttled without affecting normal owner or worker use after the retry window.

4. Acceptance record

Area	Client result	Notes
Owner access	Pass / Fail	
Worker permissions	Pass / Fail	
Disable and deletion	Pass / Fail	
News publishing	Pass / Fail	
Uploaded video	Pass / Fail	
URL video	Pass / Fail	
Homepage carousel	Pass / Fail	
Newsletter consent	Pass / Fail	
Responsive layouts	Pass / Fail	
Login protection	Pass / Fail	

5. Known operational notes

- Browser autoplay policies require automatic video playback to begin muted. Visitors can unmute using the custom control.
- Google Maps, Google Fonts, YouTube and Vimeo require access to their external domains. A broken VPN or system proxy can prevent those services from loading even while the Bestworth backend is healthy.
- Uploaded video size is limited to 50MB per file.
- Future-dated published content will remain hidden until its publication time.
- Permanent worker deletion is intentionally available only after the account has been disabled.
